

**The Dribblestop® Kit - 2 complete clamps and links**

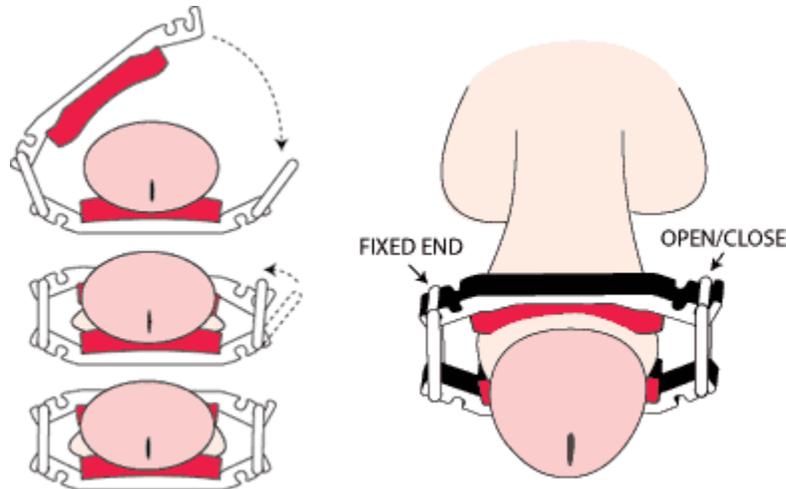

*Each kit comes with two complete clamps and numerous links in sizes small to large - resulting in the perfect fit for any man.*

*Alternating clamps daily allows the foam to regain its shape for optimum performance.*

## How the Dribblestop® Clamp Works

The Dribblestop® Male Urinary Incontinence Clamp is an external medical device worn just behind the head of the penis. The Dribblestop® clamp applies just enough pressure to the urethra to prevent the flow of urine. It's safe, easy to use, and most of all effective in controlling bladder leakage.

## Product Information about the Dribblestop® Clamp

### **Comfortable**

The entire penile clamp is made of lightweight plastic and medical approved foam that has been specially sculpted and shaped for flexible comfort and softness; plus, it does not absorb liquid. The result is a soft, natural feel - this penile clamp is so small, discreet and comfortable - 7.62 cm (3 inches) long and only 1.27 cm (1/2 inch wide) you won't even notice it's there!

### **Custom Fit**

The Dribblestop® Male Urinary Incontinence Clamp is fully adjustable. Each penile clamp comes with different sized links resulting in a choice of size options from small to large.

### **Allows Blood Circulation**

The Dribblestop® Male Urinary Incontinence Clamp does not apply any pressure to the sides of the penis. Since blood circulation is unrestricted, the clamp is comfortable and safe for 24-hour bladder control.

### **Easy to Clean**

Closed-cell foam does not absorb liquid. The Dribblestop® Male Urinary Incontinence Clamp is reusable and can be easily hand washed with warm water and soap.

### **All Plastic Construction**

The Dribblestop® Male Urinary Incontinence Clamp is made entirely of plastic and foam and will pass easily through metal detecting systems, like those used by airport security.

## **Summary**

The Dribblestop® is the perfect clamp, as it includes all of the following necessary requirements of a proven effective incontinence clamp:

- small and discreet,
- washable and reusable,
- affordable (many medical plans cover incontinence clamps),
- comfortable, sculpted design and shape,
- two complete clamps in every Dribblestop® kit,
- size adjustable – each clamp adjusts from small to large,
- safe & easy to use - put it on and forget about it,
- easy to purchase (other clamps may require a doctor's prescription, the Dribblestop® does not),
- no metal parts allowing hassle free travel through airport security,
- designed for 24- hour protection; can be safely worn all day and all night without impeding blood circulation,
- simple, proven safe construction materials (e.g. non- absorbent foam padding rather than latex).
- most important: the Dribblestop® clamp does the job it was designed to do: effectively control incontinence so you can get on with your life.
